

Analysing MaxQuant Output with R

FGC Zurich

30 September 2015

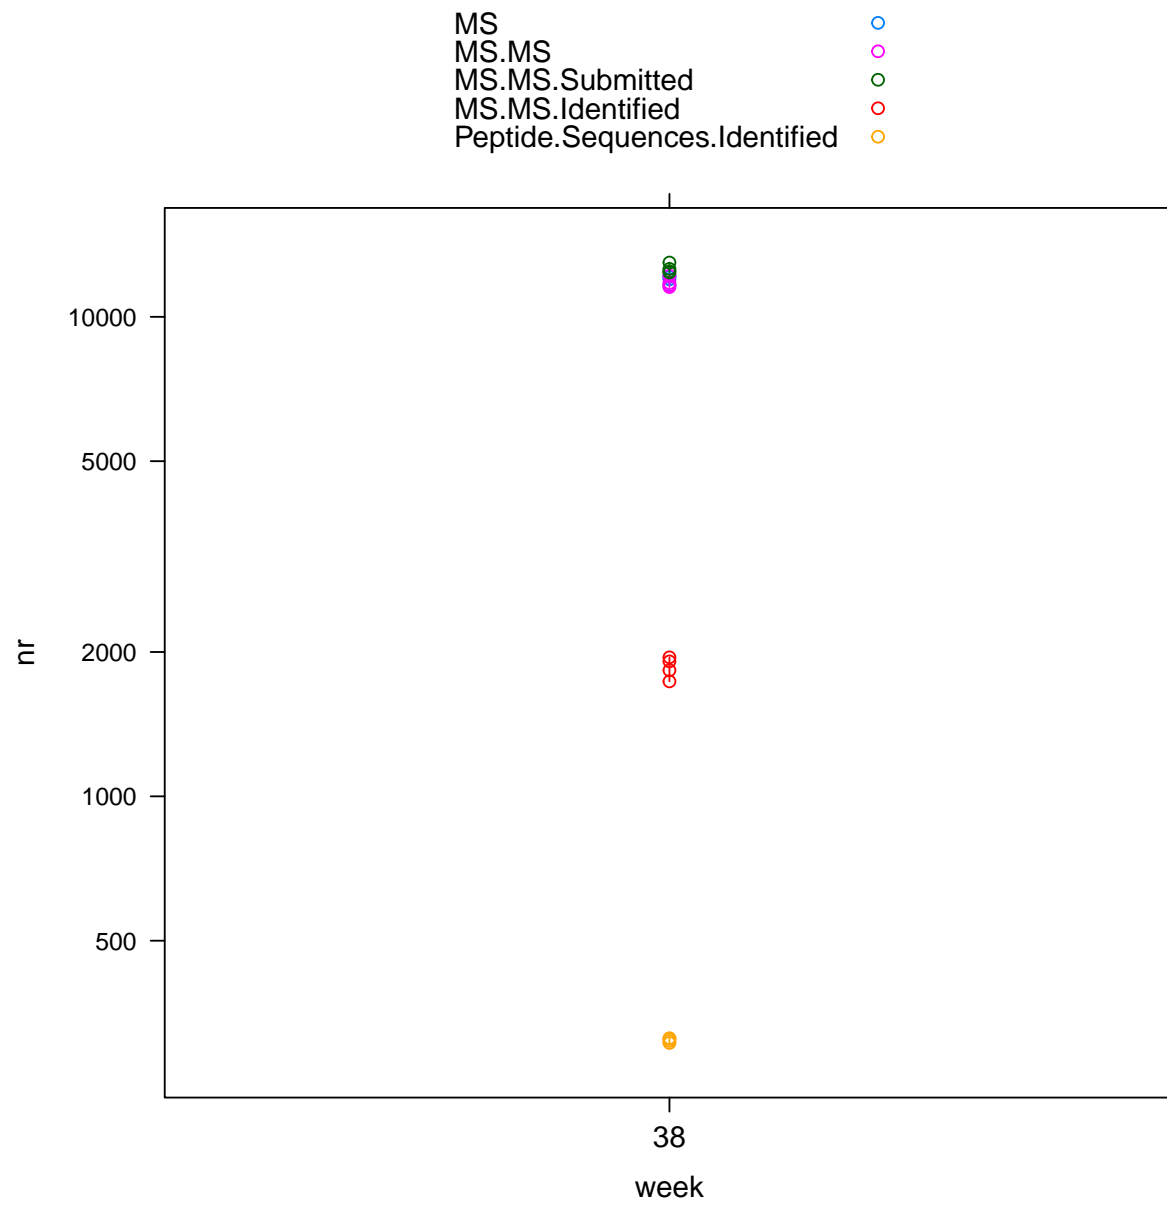

Contents

Prepare mrm table	1
Analysed Dataset is IMP_DIV	2
Looking at measurement error	3
Looking at MSQC 1 peptide counts	4
Look at Intensities (by species)	5
Looking at intensities msqc1	6
Looking at retention time	8
Log fold change	10

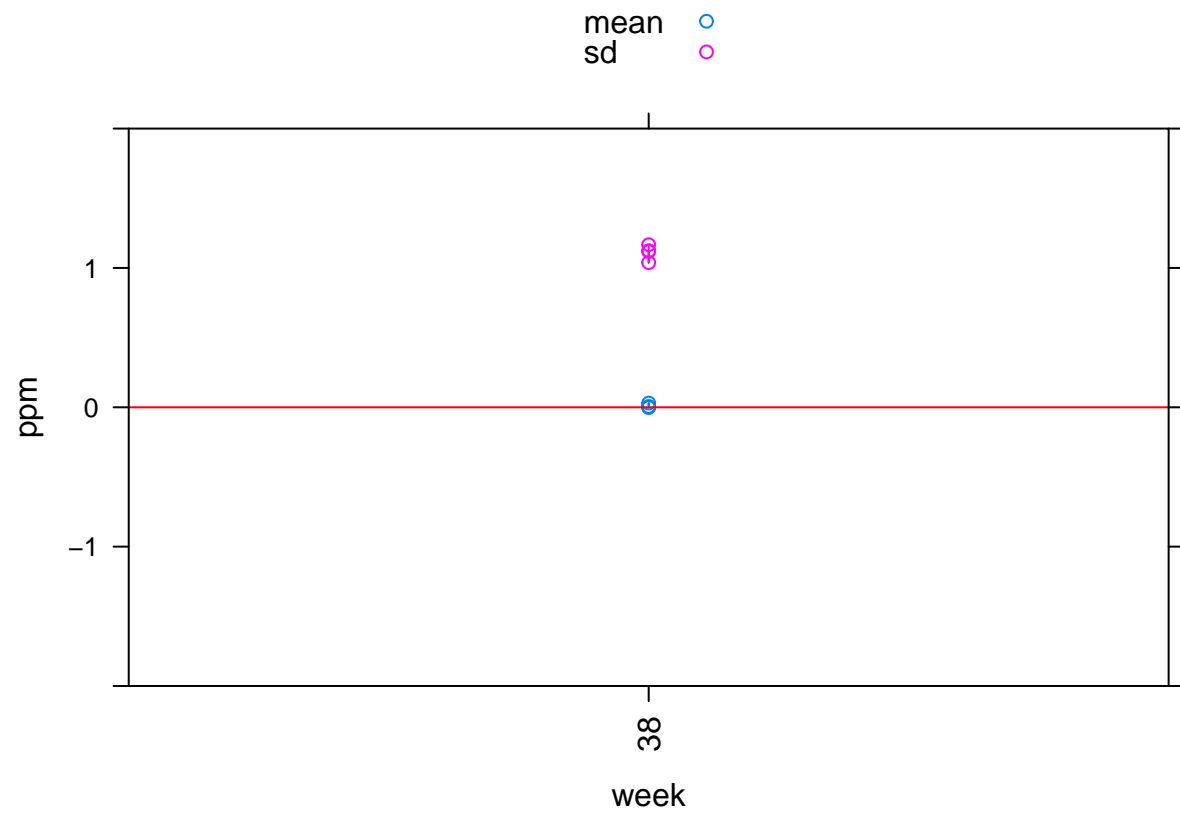

Prepare mrm table

- nr of assigned spectra (MS2) / versus total spectra
- How many H/L target peptides are identified
- Ratio among H/L of the target peptides
- Intensity of heavy or light over the runs

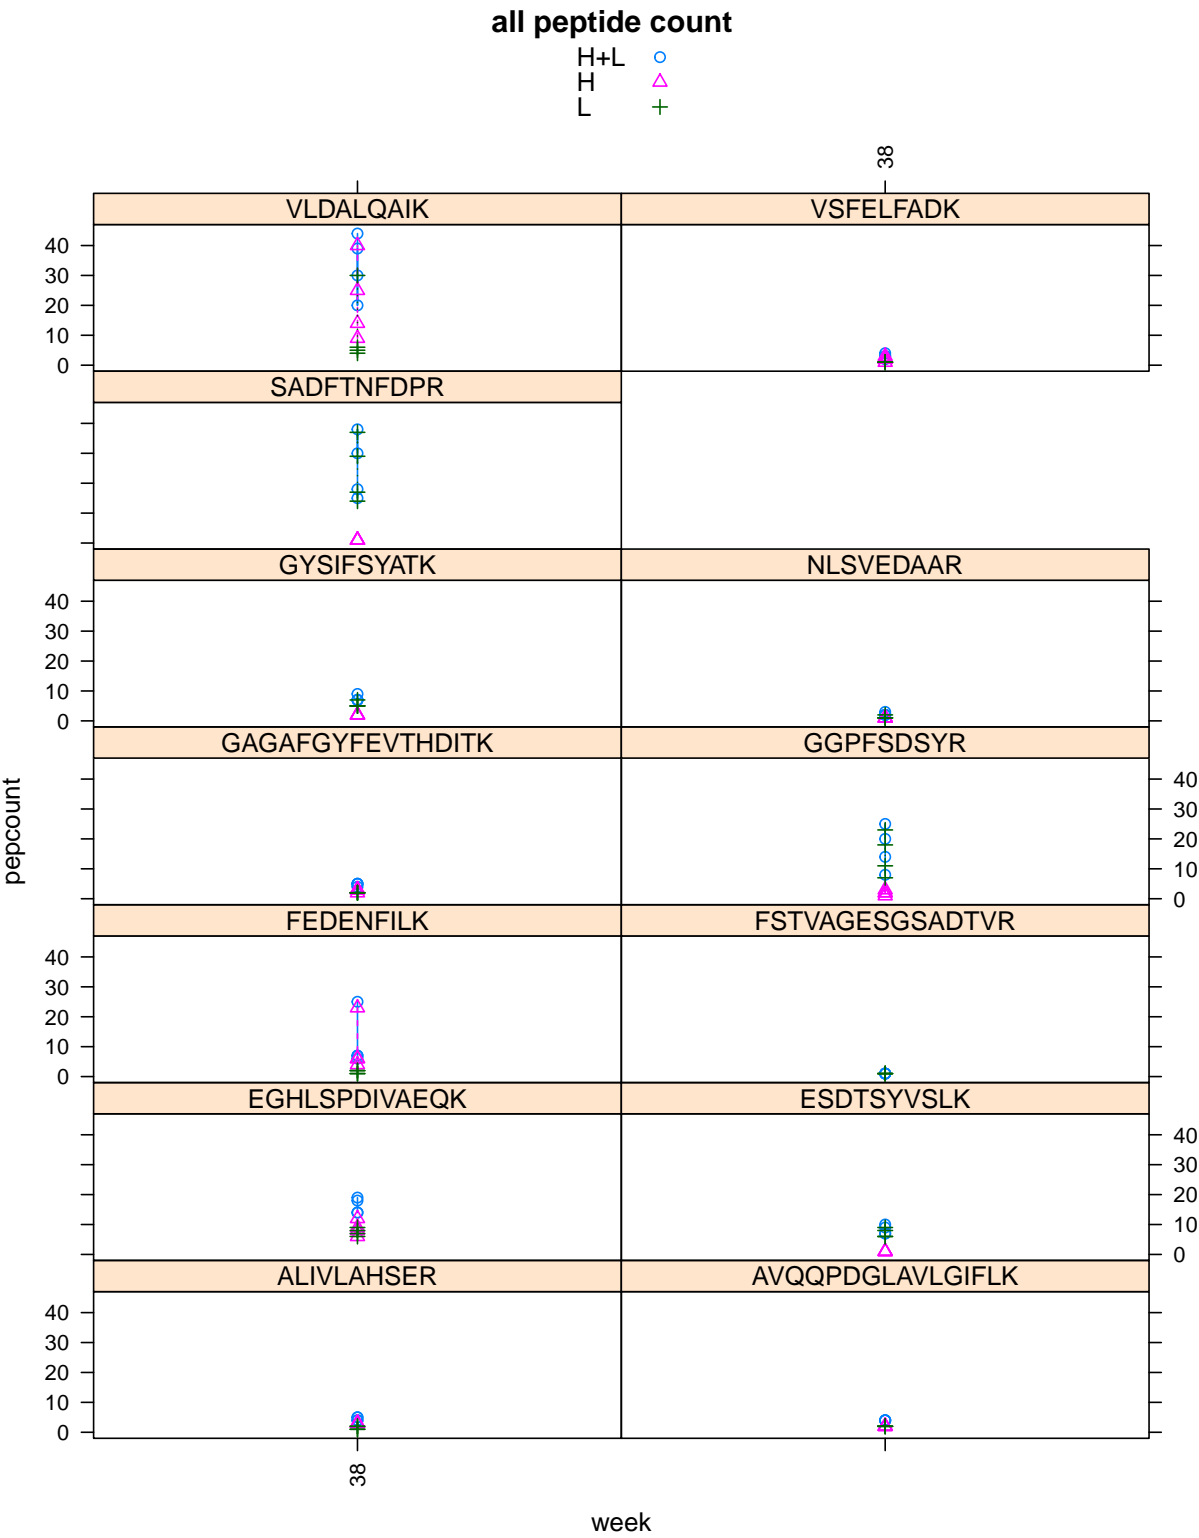

Analysed Dataset is IMP_DIV

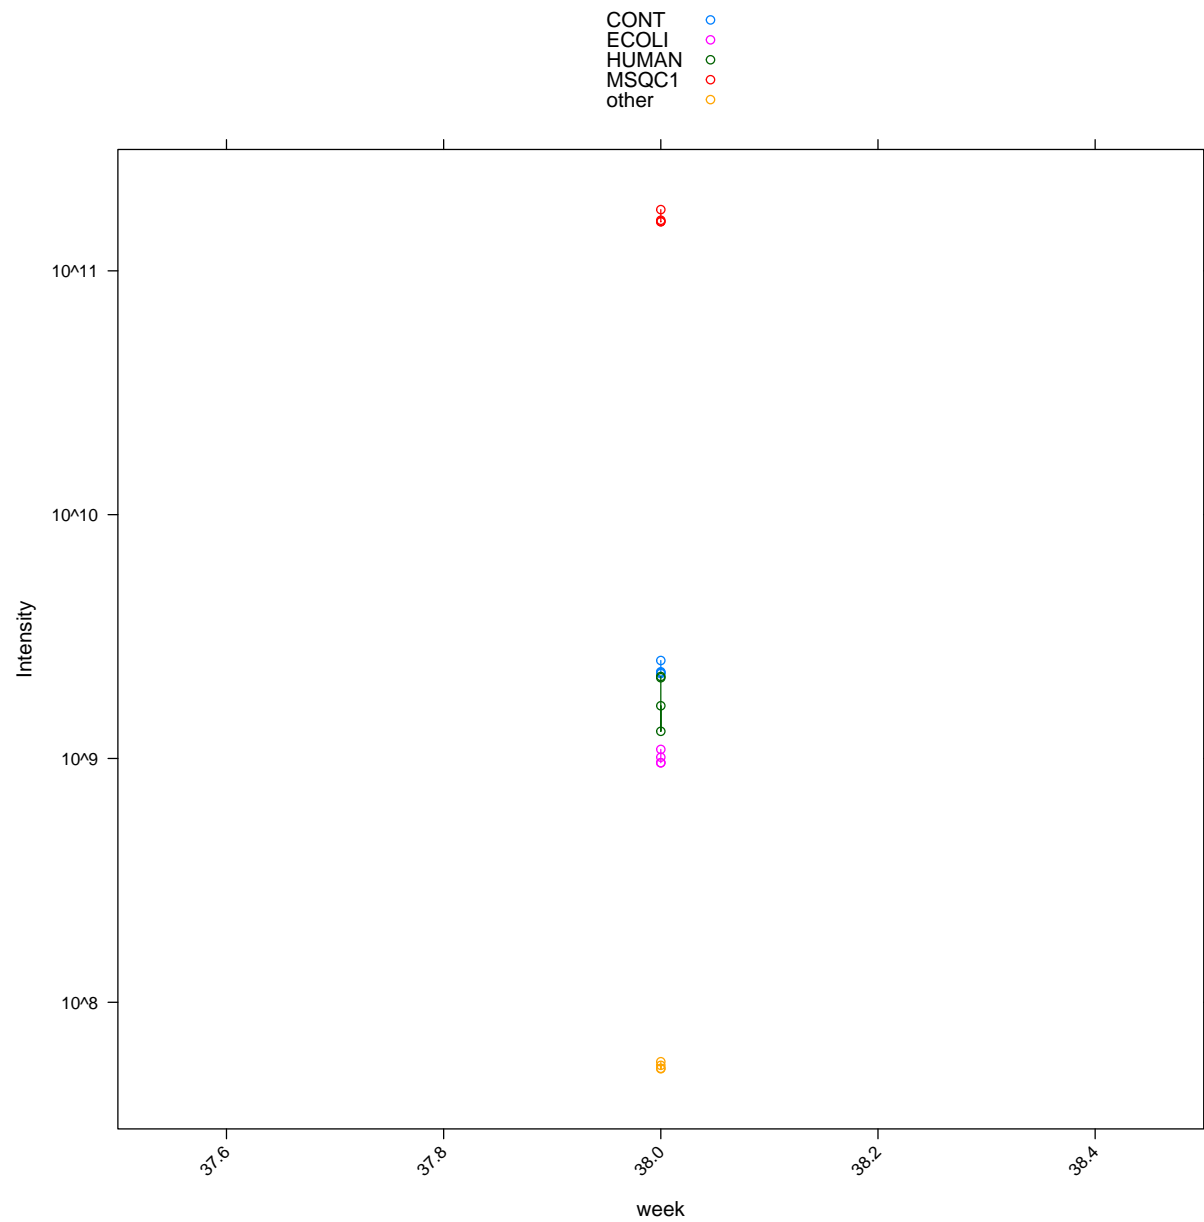

Looking at measurement error

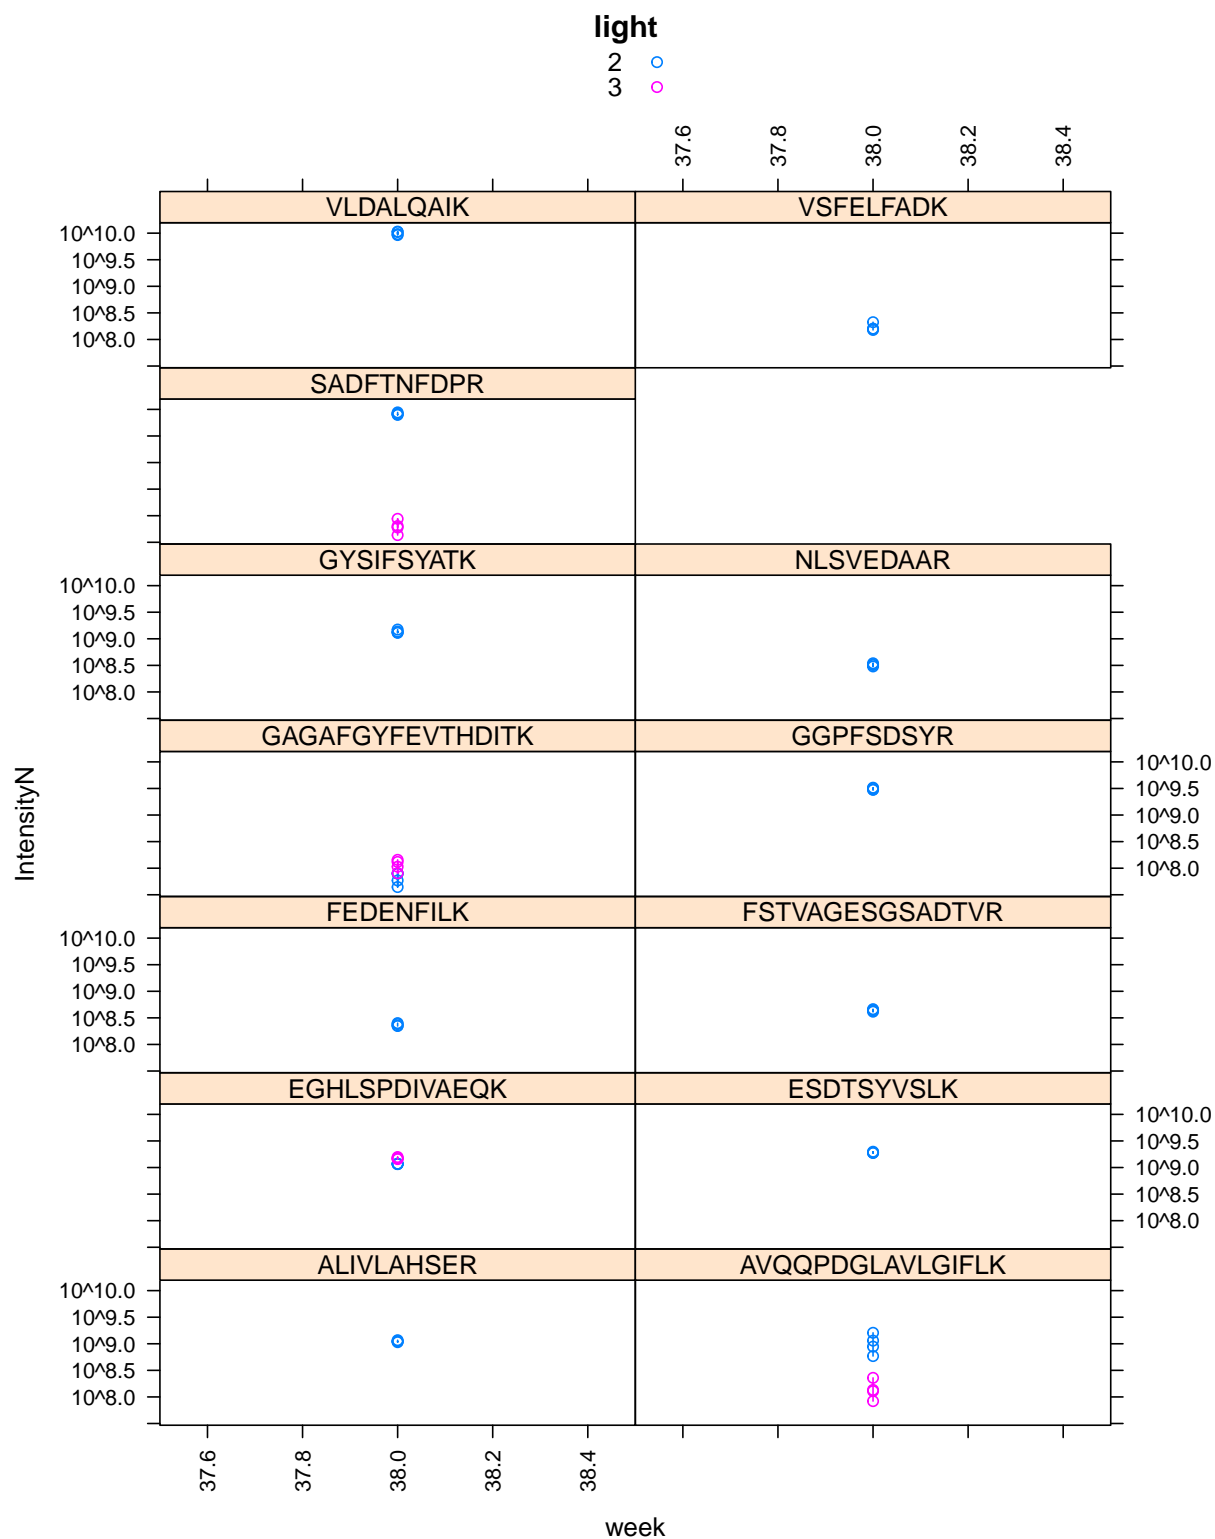

Looking at MSQC 1 peptide counts

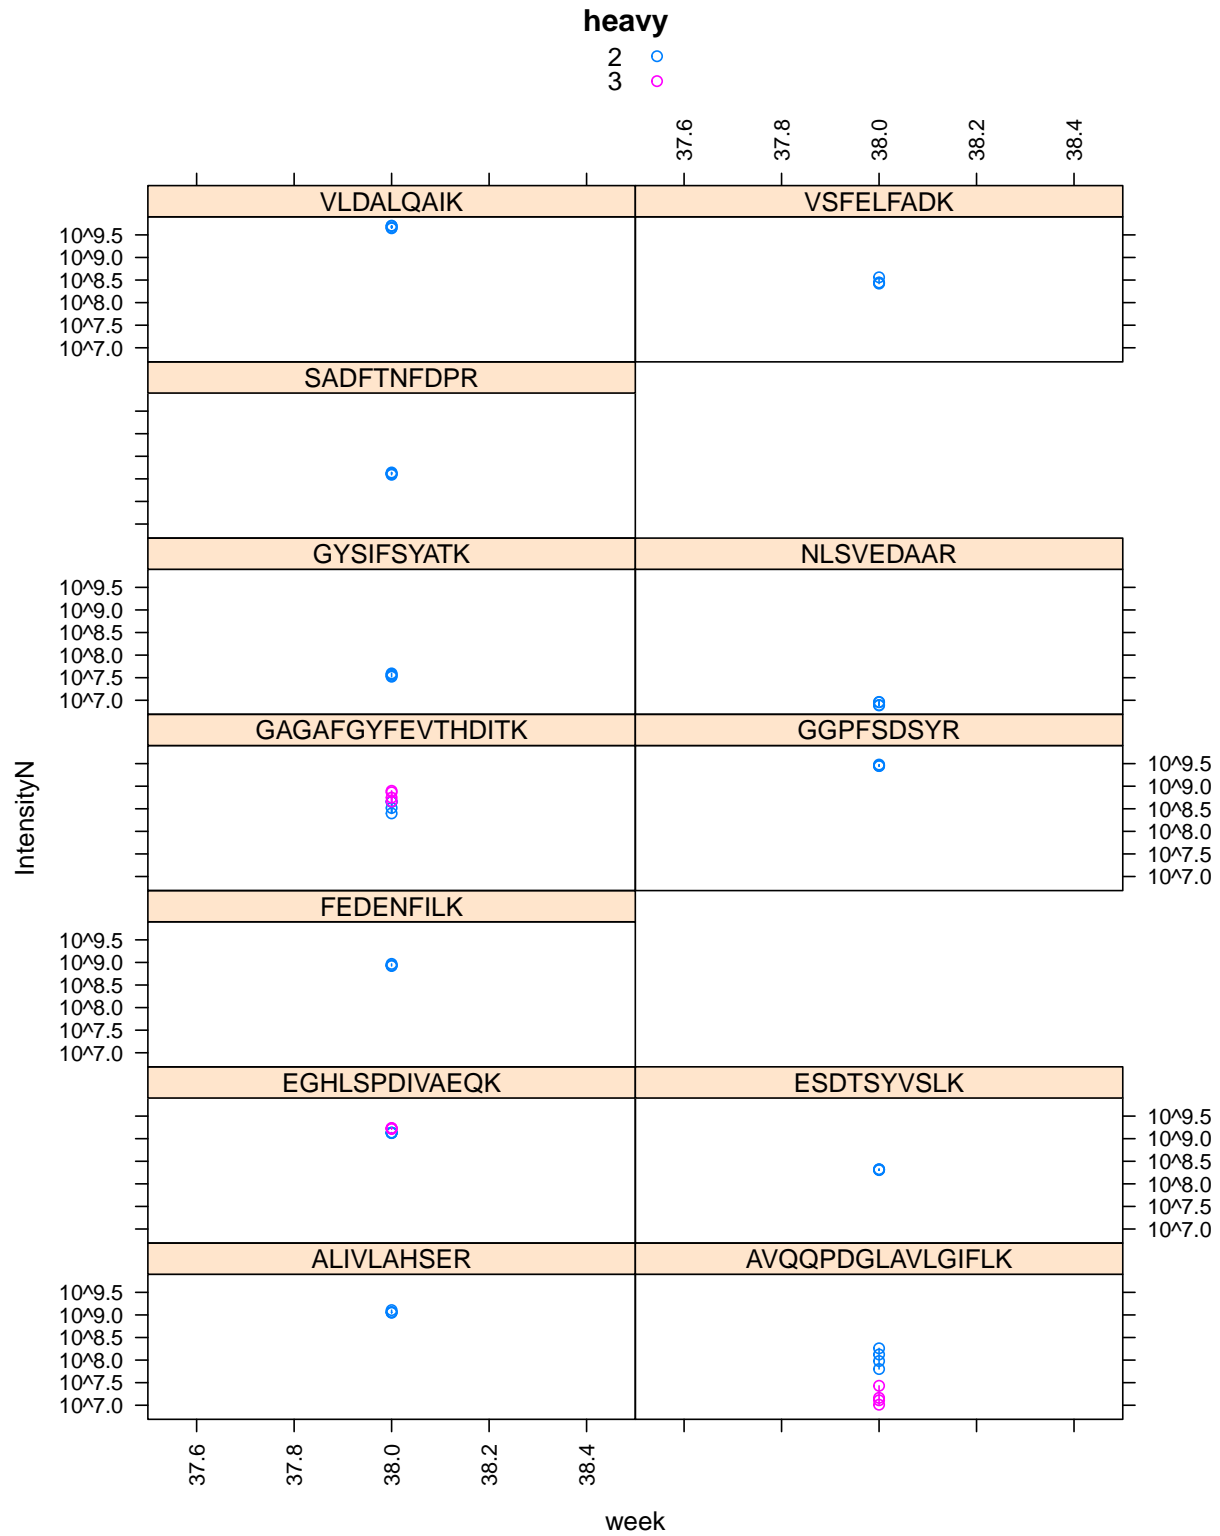

Look at Intensities (by species)

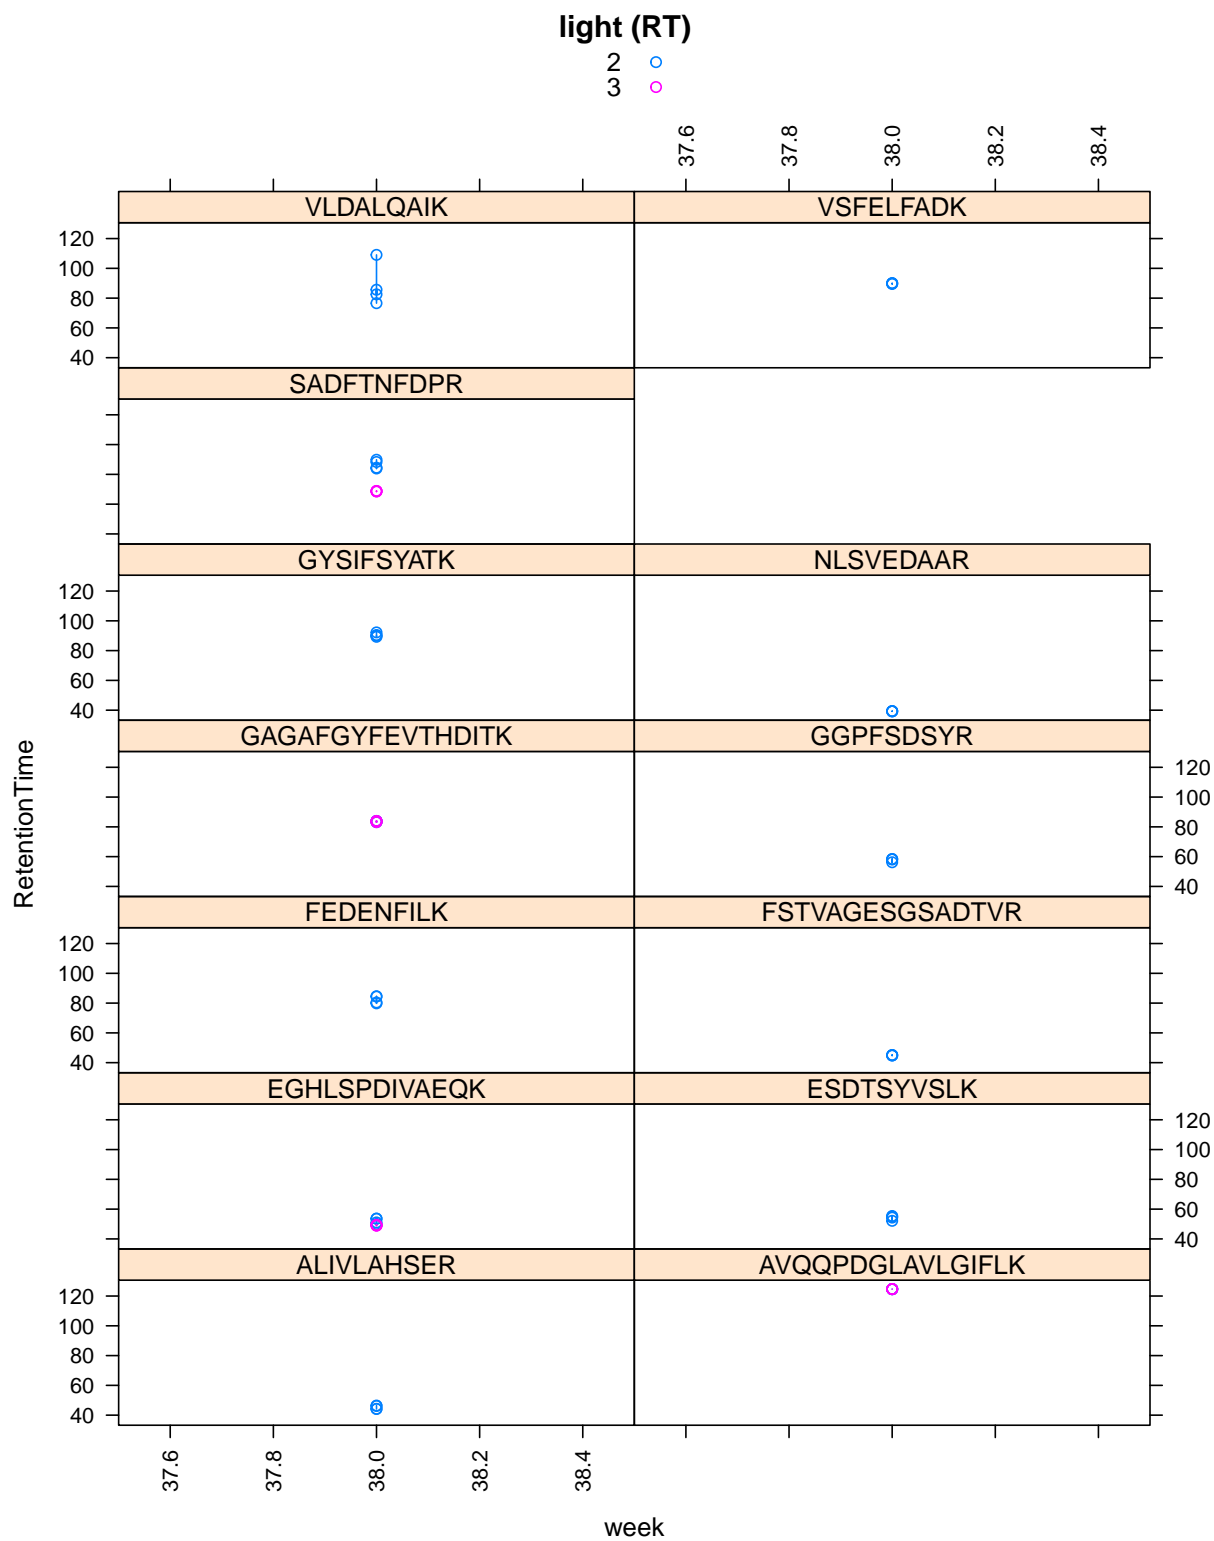

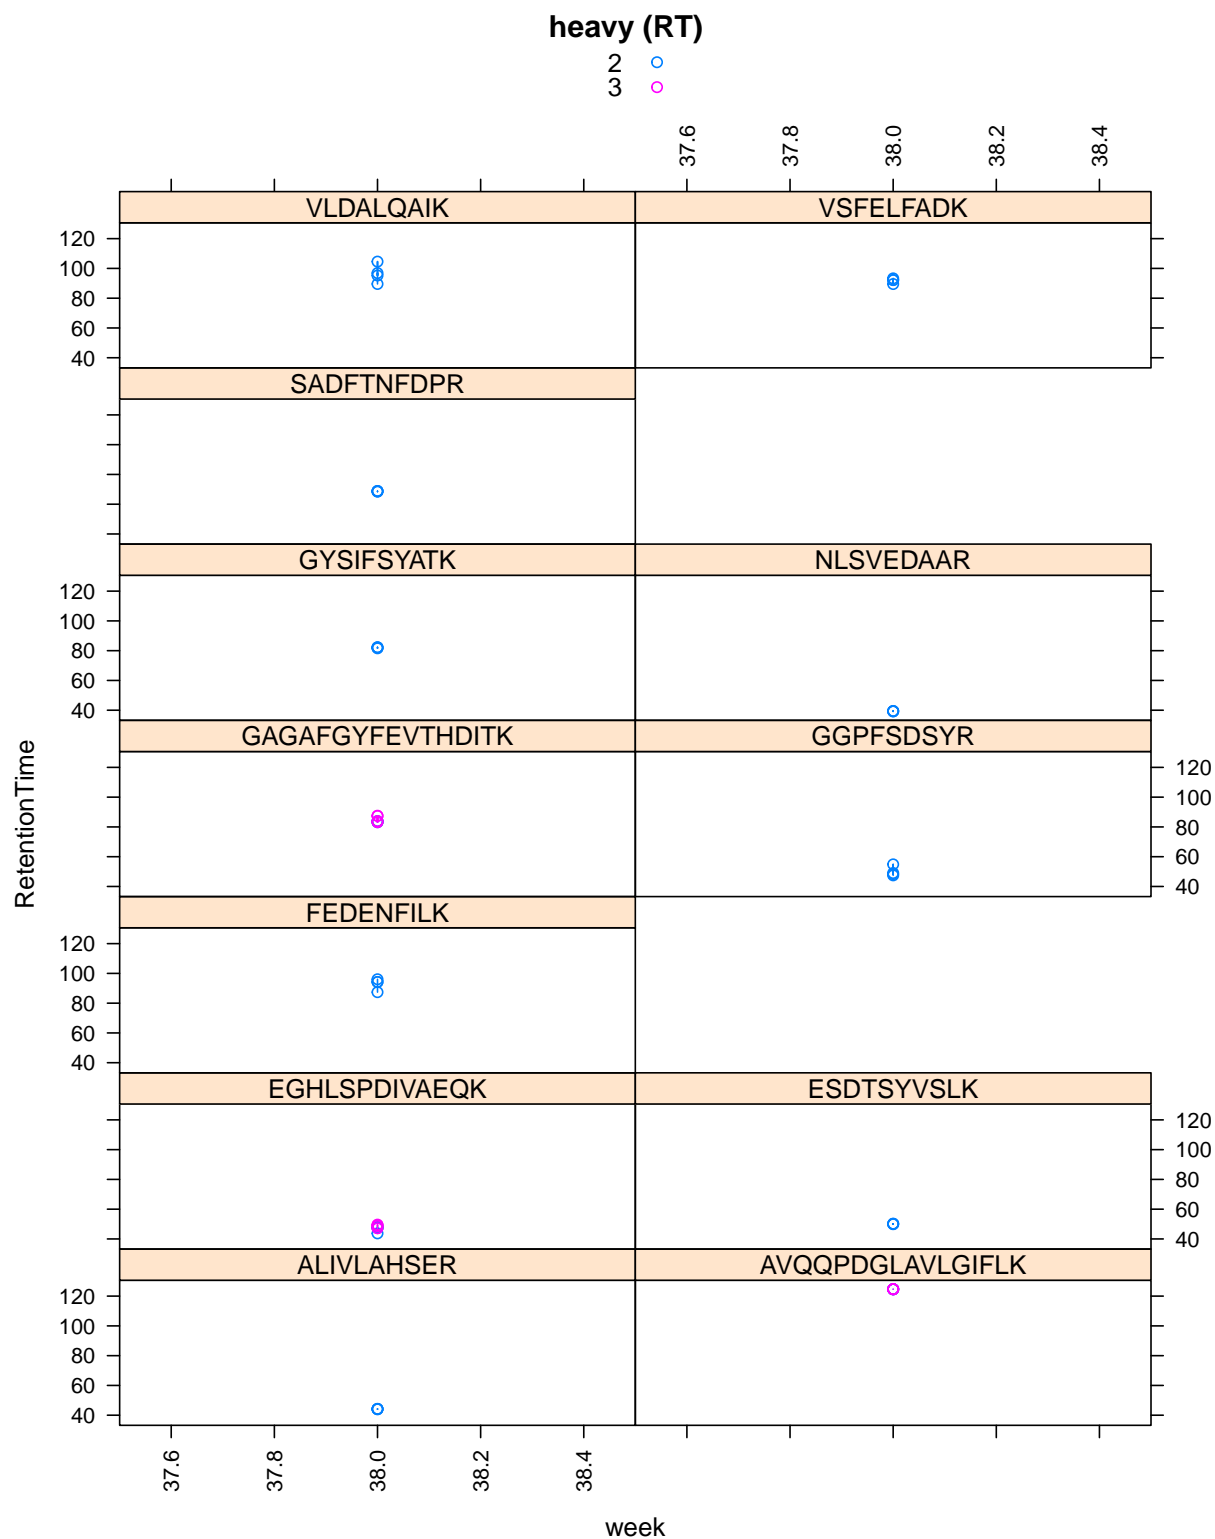

Looking at intensities msqc1

Looking at retention time

Log fold change

Warning in inner_join_impl(x, y, by\$x, by\$y): joining factors with different levels, coercing to character
